

**Tire Change Warning:
All 2006 Subaru Models**

On all 2006 Subaru models equipped with a temporary spare tire, the manufacturer recommends mounting the temporary spare *on the rear wheels only* to avoid possible transaxle damage. If a front tire is flat, mount the spare on a rear wheel first. Then, exchange the removed rear wheel and tire for the flat on the front of the vehicle. This applies to both manual and automatic transmission equipped models. NOTE: It may still be necessary to install a fuse in the under-hood fuse box to lock the vehicle in 2WD whenever a temporary spare is in use. Refer to the latest edition of the *AAA/CAA Towing and Service Manual* or the vehicle owner's manual for exact fuse locations and nomenclature.
